

ACCESS CONTROL

Ww-886

FLIP TYPE TURNSTILE

A sensor controlled passageway with glass wings to prevent unauthorized passage provides excellent access control. Designed to be in sight of reception staff, the Argus takes the problem out of checking individual passes whilst allowing authorized persons to pass unhindered. The unit is at its optimum when used in conjunction with a hand free access system which allows the glass wings to stay in the open position until an unauthorized person is detected.

FINISHING

- Steel, painted according to RAL
 - Stainless steel, hairline satin finish
- Other models on request

CONSTRUCTION

Casing and guiding tube sheets of high-quality.
Glazing: 10 mm toughened glass
